## PHENYLALKYL AND PYRIDYLALKYL PIPERAZINE DERIVATIVES

BACKGROUND OF THE INVENTION

This invention relates to heterocyclic substituted piperazines, pharmaceutical compositions containing them and their use for the treatment of schizophrenia and other central nervous system (CNS) disorders.

The heterocyclic substituted piperazine derivatives of this invention exhibit activity as antagonists of dopamine D2 receptors and of serotonin 2A (5HT2A) receptors.

Other heterocyclic piperazine derivatives that are useful for the treatment of schizophrenia are referred to in United States patent 5,350,747, which issued on September 27, 1994, and in United States patent 6,127,357, which issued on October 3, 2000. These patents are incorporated herein by reference in their entirety.

Other piperazine and piperidine derivatives that have been stated to be useful as antipsychotic agents are those referred to in PCT patent publication WO 93/04684, which published on March 18, 1993, and European patent application EP 402644A, which was published on December 19, 1990. These patent applications are incorporated herein by reference in their entirety.

SUMMARY OF THE INVENTION

The present invention relates to compounds of the formula 1

wherein M is

(i)

(ii)

$R^1$  is 1,2-benzisothiazoyl, 1,2-benzisothiazoyl-1-oxide, 1,2-benzisothiazoyl-1-dioxide, 1,2-benzisoxazolyl, naphthyl, pyridyl, quinolyl, isoquinolyl, benzothiadiazolyl, benzotriazolyl, benzoxazolyl, benzoxazolonyl, indolyl, indanyl, 1H-indazolyl, or 3-indazolyl, and wherein said  $R^1$  can optionally be substituted by one or more substituents, preferably from zero to four substituents, independently selected from halo, preferably chloro or fluoro, cyano, nitro,  $(C_1-C_6)$  alkyl optionally substituted with from one to three fluorine atoms and  $(C_1-C_6)$  alkoxy optionally substituted with from one to three fluorine atoms, and wherein the point of attachment of  $R^1$  to the piperazine nitrogen of formula 1 is a carbon atom of the heterocyclic ring of  $R^1$ ;

A is  $-(CH_2)_nCH_2-$ , wherein  $n$  is an integer from one to three;

U is carbon or nitrogen;

$m$  is 1 or 2;

each of  $X^1$ ,  $X^2$  and  $X^3$  is, independently, hydrogen, halo,  $(C_1-C_6)$  alkyl optionally substituted with from one to three fluorine atoms and  $(C_1-C_6)$  alkoxy optionally substituted with from one to three fluorine atoms;

$R^2$  is hydrogen,  $(C_1-C_6)$  alkyl, aryl( $C_1-C_6$ ) alkyl,  $(C_1-C_6)$  alkenyl, heteroaryl, or heteroaryl ( $C_1-C_6$ ) alkyl, and where the aryl and heteroaryl moieties of the foregoing  $R^2$  groups may be optionally substituted with one or two substituents independently selected from halo,  $(C_1-C_6)$  alkyl optionally substituted with from one to three fluorine atoms and  $(C_1-C_6)$  alkoxy optionally substituted with from one to three fluorine atoms;

$W$  is  $-C(O)-$ ,  $-C(O)O-$ ,  $-C(O)NH-$ ,  $-S(O)_2-$ , or  $-S(O)_2N(R^4)-$ , wherein the hyphen to the left of each of the foregoing moieties represents the

-3-

bond to  $\text{NR}^2$  in structural formula 1, and the hyphen to the right of each of the foregoing moieties represents the bond to  $\text{R}^3$  in structural formula 1; and

$\text{R}^3$  and  $\text{R}^4$  are selected, independently, from ( $\text{C}_1\text{-C}_6$ ) alkyl, aryl ( $\text{C}_1\text{-C}_6$ ) alkyl, ( $\text{C}_1\text{-C}_6$ ) alkenyl, heteroaryl, and heteroaryl ( $\text{C}_1\text{-C}_6$ ) alkyl, wherein the aryl and heteroaryl moieties of the foregoing  $\text{R}^3$  and  $\text{R}^4$  groups can be optionally be substituted with one or two substituents independently selected from halo, ( $\text{C}_1\text{-C}_6$ ) alkyl optionally substituted with from one to three fluorine atoms and ( $\text{C}_1\text{-C}_6$ ) alkoxy optionally substituted with from one to three fluorine atoms;

and the pharmaceutically acceptable salts of such compounds.

Preferred compounds of the invention include compounds of the formula 1 wherein  $\text{R}^2$  is hydrogen, methyl or ethyl.

Other preferred compounds of the invention include compounds of the formula 1 wherein  $\text{X}^1$  and  $\text{X}^2$  is hydrogen.

Other preferred compounds of the invention include compounds of the formula 1 wherein W is  $-\text{CO}-$  and  $\text{R}^3$  is ( $\text{C}_1\text{-C}_3$ ) alkyl.

Other embodiments of this invention include compounds of the formula 1 wherein U is carbon.

Other embodiments of this invention include compounds of the formula 1 wherein U is nitrogen.

Examples of specific preferred embodiments of this invention include the following compounds and their pharmaceutically acceptable salts:

N-{2-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenyl}-2-(2,5-dimethoxy-phenyl)-acetamide;

The term "aryl", as used herein, unless otherwise indicated, includes an aromatic ring system with no heteroatoms (e.g., phenyl or naphthyl).

-7-

The term "alkyl", as used herein, unless otherwise indicated, includes saturated monovalent hydrocarbon radicals having straight, branched or cyclic moieties or combinations thereof. Examples of "alkyl" groups include, but are not limited to, methyl, ethyl, propyl, isopropyl, butyl, iso- sec- and tert-butyl, pentyl, hexyl, heptyl, 3-ethylbutyl, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, norbornyl, and the like.

The term "alkoxy", as used herein, unless otherwise indicated, means "alkyl-O-", wherein "alkyl" is as defined above. Examples of "alkoxy" groups include, but are not limited to, methoxy, ethoxy, propoxy, butoxy and pentoxy.

The term "alkenyl", as used herein, unless otherwise indicated, includes unsaturated hydrocarbon radicals having one or more double bonds connecting two carbon atoms, wherein said hydrocarbon radical may have straight, branched or cyclic moieties or combinations thereof. Examples of "alkenyl" groups include, but are not limited to, ethenyl, propenyl, butenyl, pentenyl.

The term "heteroaryl", as used herein, unless otherwise indicated, includes monocyclic aromatic heterocycles containing five or six ring members, of which from 1 to 4 can be heteroatoms selected, independently, from N, S and O, and bicyclic aromatic heterocycles containing from eight to twelve ring members, of which from 1 to 4 can be heteroatoms selected, independently, from N, S and O.

The term "one or more substituents", as used herein, refers to a number of substituents that equals from one to the maximum number of substituents possible based on the number of available bonding sites.

The terms "halo" and "halogen", as used herein, unless otherwise indicated, include, fluoro, chloro, bromo and iodo.

The term "treating", as used herein, refers to reversing, alleviating, inhibiting the progress of, or preventing the disorder or condition to which such term applies, or preventing one or more symptoms of such condition or disorder.

The term "treatment", as used herein, refers to the act of treating, as "treating" is defined immediately above.

-8-

The term "methylene", as used herein, means  $-\text{CH}_2-$ .

The term "ethylene", as used herein, means  $-\text{CH}_2\text{CH}_2-$ .

The term "propylene", as used herein, means  $-\text{CH}_2\text{CH}_2\text{CH}_2-$ .

The compounds of formula 1 and their pharmaceutically acceptable salts are also referred to herein, collectively, as the "novel compounds of this invention" and the "active compounds of this invention".

This invention also relates to a pharmaceutical composition comprising a therapeutically effective amount of a compound of the formula 1, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable carrier.

Compounds of formula 1 may contain chiral centers and therefore may exist in different enantiomeric and diastereomeric forms. This invention relates to all optical isomers and all stereoisomers of compounds of the formula 1, both as racemic mixtures and as individual enantiomers and diastereoisomers of such compounds, and mixtures thereof, and to all pharmaceutical compositions and methods of treatment defined above that contain or employ them, respectively. Individual isomers can be obtained by known methods, such as optical resolution, optically selective reaction, or chromatographic separation in the preparation of the final product or its intermediate. Individual enantiomers of the compounds of formula 1 may have advantages, as compared with the racemic mixtures of these compounds, in the treatment of various disorders or conditions.

In so far as the compounds of formula 1 of this invention are basic compounds, they are all capable of forming a wide variety of different salts with various inorganic and organic acids. Although such salts must be pharmaceutically acceptable for administration to animals, it is often desirable in practice to initially isolate the base compound from the reaction mixture as a pharmaceutically unacceptable salt and then simply convert to the free base compound by treatment with an alkaline reagent and thereafter convert the free base to a pharmaceutically acceptable acid addition salt. The acid addition salts of the base compounds of this invention are readily prepared by treating the base compound with a substantially equivalent amount of the chosen mineral or organic acid in an

-9-

aqueous solvent or in a suitable organic solvent, such as methanol or ethanol. Upon careful evaporation of the solvent, the desired solid salt is readily obtained. The acids which are used to prepare the pharmaceutically acceptable acid addition salts of the aforementioned base compounds of this invention are those which form non-toxic acid addition salts, *i.e.*, salts containing pharmaceutically acceptable anions, such as the hydrochloride, hydrobromide, hydroiodide, nitrate, sulfate or bisulfate, phosphate or acid phosphate, acetate, lactate, citrate or acid citrate, tartrate or bi-tartrate, succinate, maleate, fumarate, gluconate, saccharate, benzoate, methanesulfonate, ethanesulfonate, benzenesulfonate, p-toluenesulfonate and pamoate (*i.e.*, 1,1'-methylenebis-(2-hydroxy-3-naphthoate))salts.

The present invention also includes isotopically labelled compounds, which are identical to those recited in formula 1, but for the fact that one or more atoms are replaced by an atom having an atomic mass or mass number different from the atomic mass or mass number usually found in nature. Examples of isotopes that can be incorporated into compounds of the present invention include isotopes of hydrogen, carbon, nitrogen, oxygen, phosphorous, sulfur, fluorine and chlorine, such as  $^2\text{H}$ ,  $^3\text{H}$ ,  $^{13}\text{C}$ ,  $^{11}\text{C}$ ,  $^{14}\text{C}$ ,  $^{15}\text{N}$ ,  $^{18}\text{O}$ ,  $^{17}\text{O}$ ,  $^{31}\text{P}$ ,  $^{32}\text{P}$ ,  $^{35}\text{S}$ ,  $^{18}\text{F}$ , and  $^{36}\text{Cl}$ , respectively. Compounds of the present invention, prodrugs thereof, and pharmaceutically acceptable salts of said compounds or of said prodrugs which contain the aforementioned isotopes and/or other isotopes of other atoms are within the scope of this invention. Certain isotopically labelled compounds of the present invention, for example those into which radioactive isotopes such as  $^3\text{H}$  and  $^{14}\text{C}$  are incorporated, are useful in drug and/or substrate tissue distribution assays. Tritiated, *i.e.*,  $^3\text{H}$ , and carbon-14, *i.e.*,  $^{14}\text{C}$ , isotopes are particularly preferred for their ease of preparation and detectability. Further, substitution with heavier isotopes such as deuterium, *i.e.*,  $^2\text{H}$ , can afford certain therapeutic advantages resulting from greater metabolic stability, for example increased *in vivo* half-life or reduced dosage requirements and, hence, may be preferred in some circumstances. Isotopically labelled compounds of formula 1 of this

-10-

invention and prodrugs thereof can generally be prepared by carrying out the procedures disclosed in the Schemes and/or in the Examples below, by substituting a readily available isotopically labelled reagent for a non-isotopically labelled reagent.

5       The compounds of formula **1** of this invention have useful pharmaceutical and medicinal properties.

10       This invention also relates to a method of treating a disorder or condition selected from the group consisting of single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression, melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective disorder and pediatric depression; bipolar disorders or manic depression, 15       for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder; conduct disorder; disruptive behavior disorder; behavioral disturbances associated with mental retardation, autistic disorder, and conduct disorder; anxiety disorders such as panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobias, for 20       example, specific animal phobias, social anxiety, social phobia, obsessive-compulsive disorder, stress disorders including post-traumatic stress disorder and acute stress disorder, and generalized anxiety disorders; borderline personality disorder; schizophrenia and other psychotic disorders, for example, schizophreniform disorders, schizoaffective 25       disorders, delusional disorders, brief psychotic disorders, shared psychotic disorders, psychotic disorders with delusions or hallucinations, psychotic episodes of anxiety, anxiety associated with psychosis, psychotic mood disorders such as severe major depressive disorder; mood disorders associated with psychotic disorders such as acute mania and depression 30       associated with bipolar disorder; mood disorders associated with schizophrenia; delirium, dementia, and amnestic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), Alzheimer's disease, senile dementia,

-11-

dementia of the Alzheimer's type, memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies; movement disorders such as akinesias, dyskinesias, including familial paroxysmal dyskinesias, spasticities, Tourette's syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia, neuroleptic-induced acute akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour; chemical dependencies and addictions (e.g., dependencies on, or addictions to, alcohol, heroin, cocaine, benzodiazepines, nicotine, or phenobarbital) and behavioral addictions such as an addiction to gambling; and ocular disorders such as glaucoma and ischemic retinopathy in a mammal, including a human, comprising administering to a mammal in need of such treatment an amount of a compound of the formula 1, or a pharmaceutically acceptable salt thereof, that is effective in treating such disorder or condition.

The compounds of formula 1 and their pharmaceutically acceptable salts are also referred to herein, collectively, as the "novel compounds of this invention" and the "active compounds of this invention".

This invention also relates to a pharmaceutical composition comprising a therapeutically effective amount of a compound of the formula 1, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable carrier.

This invention also relates to a pharmaceutical composition for treating a disorder or condition selected from single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression, melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective

such as an addiction to gambling; and ocular disorders such as glaucoma and ischemic retinopathy in a mammal in need of such treatment, including a human, comprising an amount of a compound of the formula 1, or a pharmaceutically acceptable salt thereof, that is effective in treating  
5 such disorder or condition, and a pharmaceutically acceptable carrier.

A more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from major depression, single episode depression, recurrent depression, child abuse induced depression, postpartum depression, dysthymia,  
10 cyclothymia and bipolar disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from schizophrenia, schizoaffective disorder, delusional disorder, substance-induced psychotic disorder, brief psychotic disorder, shared  
15 psychotic disorder, psychotic disorder due to a general medical condition, and schizophreniform disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from autism, pervasive development disorder, and attention deficit  
20 hyperactivity disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from generalized anxiety disorder, panic disorder, obsessive-compulsive disorder, post-traumatic stress disorder, and phobias, including  
25 social phobia, agoraphobia, and specific phobias.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from movement disorders such as akinesias, dyskinesias, including familial paroxysmal dyskinesias, spasticities, Tourette's  
30 syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; and extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia,

-14-

neuroleptic-induced acute akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from delirium, dementia, and amnesic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), Alzheimer's disease, senile dementia, dementia of the Alzheimer's type, memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies.

Another more specific embodiment of this invention relates to the above method wherein the compound of formula 1 is administered to a human for the treatment of any two or more comorbid disorders or conditions selected from those disorders and conditions referred to in any of the above methods.

For the treatment of depression, anxiety, schizophrenia or any of the other disorders and conditions referred to above in the descriptions of the methods and pharmaceutical compositions of this invention, the novel compounds of this invention can be used in conjunction with one or more other antidepressants or anti-anxiety agents. Examples of classes of antidepressants that can be used in combination with the active compounds of this invention include norepinephrine reuptake inhibitors, selective serotonin reuptake inhibitors (SSRIs), NK-1 receptor antagonists, monoamine oxidase inhibitors (MAOIs), reversible inhibitors of monoamine oxidase (RIMAs), serotonin and noradrenaline reuptake inhibitors (SNRIs), corticotropin releasing factor (CRF) antagonists,  $\alpha$ -adrenoreceptor antagonists, and atypical antidepressants. Suitable norepinephrine reuptake inhibitors include tertiary amine tricyclics and secondary amine tricyclics. Suitable tertiary amine tricyclics and secondary amine tricyclics include amitriptyline, clomipramine, doxepin, imipramine, trimipramine, dothiepin, butriptyline, iprindole, lofepramine, nortriptyline, protriptyline,

-15-

amoxapine, desipramine and maprotiline. Suitable selective serotonin reuptake inhibitors include fluoxetine, fluvoxamine, paroxetine and sertraline. Examples of monoamine oxidase inhibitors include isocarboxazid, phenelzine, and tranylcyclopramine. Suitable reversible inhibitors of monoamine oxidase include moclobemide. Suitable serotonin and noradrenaline reuptake inhibitors of use in the present invention include venlafaxine. Suitable CRF antagonists include those compounds described in International Patent Application Nos. WO 94/13643, WO 94/13644, WO 94/13661, WO 94/13676 and WO 94/13677. Suitable atypical anti-depressants include bupropion, lithium, nefazodone, trazodone and viloxazine. Suitable NK-1 receptor antagonists include those referred to in World Patent Publication WO 01/77100.

Suitable classes of anti-anxiety agents that can be used in combination with the active compounds of this invention include benzodiazepines and serotonin 1A (5-HT<sub>1A</sub>) agonists or antagonists, especially 5-HT<sub>1A</sub> partial agonists, and corticotropin releasing factor (CRF) antagonists. Suitable benzodiazepines include alprazolam, chlordiazepoxide, clonazepam, chlorazepate, diazepam, halazepam, lorazepam, oxazepam, and prazepam. Suitable 5-HT<sub>1A</sub> receptor agonists or antagonists include buspirone, flesinoxan, gepirone and ipsapirone.

This invention also relates to a method of treating a disorder or condition selected from single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression, melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective disorder and pediatric depression; bipolar disorders or manic depression, for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder; conduct disorder; disruptive behavior disorder; behavioral disturbances associated with mental retardation, autistic disorder, and conduct disorder; anxiety disorders such as panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobias, for

-16-

example, specific animal phobias, social anxiety, social phobia, obsessive-compulsive disorder, stress disorders including post-traumatic stress disorder and acute stress disorder, and generalized anxiety disorders; borderline personality disorder; schizophrenia and other psychotic disorders, for example, schizophreniform disorders, schizoaffective disorders, delusional disorders, brief psychotic disorders, shared psychotic disorders, psychotic disorders with delusions or hallucinations, psychotic episodes of anxiety, anxiety associated with psychosis, psychotic mood disorders such as severe major depressive disorder; mood disorders associated with psychotic disorders such as acute mania and depression associated with bipolar disorder; mood disorders associated with schizophrenia; delirium, dementia, and amnestic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), Alzheimer's disease, senile dementia, dementia of the Alzheimer's type, memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies; movement disorders such as akinesias, dyskinesias, including familial paroxysmal dyskinesias, spasticities, Tourette's syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia, neuroleptic-induced acute akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour; chemical dependencies and addictions (e.g., dependencies on, or addictions to, alcohol, heroin, cocaine, benzodiazepines, nicotine, or phenobarbitol) and behavioral addictions such as an addiction to gambling; and ocular disorders such as glaucoma and ischemic retinopathy in a mammal in need of such treatment, including a human, comprising administering to said mammal:

(a) a compound of the formula 1 or a pharmaceutically acceptable salt thereof; and

-17-

(b) another pharmaceutically active compound that is an antidepressant or anti-anxiety agent, or a pharmaceutically acceptable salt thereof;

5 wherein the active compounds "a" and "b" are present in amounts that render the combination effective in treating such disorder or condition.

A more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from major depression, single episode depression, recurrent depression, child abuse induced depression, postpartum depression, dysthymia, 10 cyclothymia and bipolar disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from schizophrenia, schizoaffective disorder, delusional disorder, substance-induced psychotic disorder, brief psychotic disorder, shared 15 psychotic disorder, psychotic disorder due to a general medical condition, and schizophreniform disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from autism, pervasive development disorder, and attention deficit 20 hyperactivity disorder.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from generalized anxiety disorder, panic disorder, obsessive-compulsive disorder, post-traumatic stress disorder, and phobias, including 25 social phobia, agoraphobia, and specific phobias.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from movement disorders such as akinesias, dyskinesias, including familial paroxysmal dyskinesias, spasticities, Tourette's 30 syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; and extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia,

-18-

neuroleptic-induced acute akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour.

Another more specific embodiment of this invention relates to the above method wherein the disorder or condition that is being treated is selected from delirium, dementia, and amnesic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), Alzheimer's disease, senile dementia, dementia of the Alzheimer's type, memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies.

Another more specific embodiment of this invention relates to the above method wherein the compound of formula 1 and the additional antidepressant or anti-anxiety agent are administered to a human for the treatment of any two or more comorbid disorders or conditions selected from those disorders and conditions referred to in any of the above methods.

This invention also relates to a pharmaceutical composition for treating a disorder or condition selected from single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression, melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective disorder and pediatric depression; bipolar disorders or manic depression, for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder; conduct disorder; disruptive behavior disorder; behavioral disturbances associated with mental retardation, autistic disorder, and conduct disorder; anxiety disorders such as panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobias, for example, specific animal phobias, social anxiety, social phobia, obsessive-compulsive disorder, stress disorders including post-traumatic stress disorder and acute stress disorder, and generalized anxiety disorders; borderline personality disorder; schizophrenia and other psychotic

wherein the active compounds "a" and "b" are present in amounts that render the composition effective in treating such disorder or condition.

### DETAILED DESCRIPTION OF THE INVENTION

5 The compounds of formula 1 of the present invention may be prepared as described in the following reaction schemes. Unless otherwise indicated, in the reaction schemes and discussion that follow, R<sup>1</sup> through R<sup>3</sup>, n, m, W, U, A, X<sup>1</sup>, X<sup>2</sup> and X<sup>3</sup> are defined as above.

10

#### Scheme A

15

20

25

Scheme A illustrates a method for preparing compounds of the formula 1 by reaction of compound of the formula 2 with a compound of the formula R<sup>3</sup>-T wherein T is -COCl, an acid or a suitably activated acid derivative such as the mixed anhydride, -OCOCl, -N=C=O, or -SO<sub>2</sub>Cl, or R<sup>3</sup>-T is ClSO<sub>2</sub>N(Me)<sub>2</sub> or ClSO<sub>2</sub>R<sup>3</sup>R<sup>4</sup>. The reaction above may be carried out in an inert solvent such as methylene chloride, dichloroethane, benzene, toluene, or pyridine, preferably methylene chloride. This reaction is typically carried out at a temperature from about -78 °C to about the reflux temperature of the solvent, preferably from about 0 °C to about 25 °C, for a period of about 5 minutes to 48 hours, preferably from 0.5 to 16 hours. The reaction is typically performed in the presence of organic base such as diisopropylethylamine, or pyridine, or triethylamine, preferably triethylamine, or in the presence of a polymer supported base such as tris-(2-aminoethyl)amine polystyrene.

-21-

Scheme B

Scheme B illustrates a method for preparing compounds of the formula 2 by the reductive amination of compounds of the formula 3 with compounds of the formula  $R^5R^6C=O$ , wherein  $R^5$  and  $R^6$  are independently selected from hydrogen, (C<sub>1</sub>-C<sub>3</sub>) alkyl, aryl, aryl (C<sub>1</sub>-C<sub>6</sub>) alkyl, (C<sub>1</sub>-C<sub>3</sub>) alkenyl, heteroaryl, and heteroaryl (C<sub>1</sub>-C<sub>6</sub>) alkyl, wherein the aryl and heteroaryl moieties of the foregoing  $R^5$  and  $R^6$  groups can be optionally substituted with one or two substituents that are independently selected from halo, (C<sub>1</sub>-C<sub>6</sub> alkyl) optionally substituted with from one to three fluorine atoms and (C<sub>1</sub>-C<sub>6</sub> alkoxy) optionally substituted with from one to three fluorine atoms.

The above reaction may be carried in one vessel without isolation of the imine intermediate, or  $R^5R^6C=O$  and the compound of formula 3 may be combined in an inert solvent such as methylene chloride, dichloroethane, toluene or benzene, either at about room temperature or at about the reflux temperature of the solvent, with or without removal of the by product water, to form the imine, which is then reduced. The reduction can be carried out using methods well known to those of skill in the art, for example, by catalytic hydrogenation, or, preferably, with several hydride reagents in a reaction inert solvent. The catalytic hydrogenation can be carried out in the presence of a metal catalyst such as palladium or Raney nickel. Suitable hydride reagents include borohydrides such as sodium borohydride (NaBH<sub>4</sub>), sodium cyanoborohydride (NaBH<sub>3</sub>CN) and sodium triacetoxymethylborohydride (NaB(OAc)<sub>3</sub>H), boranes, aluminum based reagents and trialkylsilanes. Suitable solvents include polar solvents such as methanol, ethanol, methylene chloride, dichloroethane, tetrahydrofuran (THF), dioxane, toluene, benzene and ethylacetate. This reaction is typically carried out at a

-22-

temperature from about  $-78^{\circ}\text{C}$  to about the reflux temperature of the solvent, preferably from about  $0^{\circ}\text{C}$  to about  $25^{\circ}\text{C}$ , for a period of about 5 minutes to about 48 hours, preferably from about 0.5 to 16 hours. The reduction is typically carried out using  $\text{NaB}(\text{OAc})_3\text{H}$ , with or without the addition of acetic acid ( $\text{HOAc}$ ), preferably in a polar solvent like methylene chloride ( $\text{CH}_2\text{Cl}_2$ ) or dichloroethane. Alternatively, when  $\text{R}^4$  and  $\text{R}^5$  are hydrogen, the reaction product of formula 2, wherein  $\text{R}^2$  is  $-\text{CH}_3$ , can be formed by using the method reported in Barluenga, J.; Bayon, A. M.; Asensio, G., *JCSCC* **1984**, 1334-1335.

Scheme C

Scheme C illustrates a method for the preparation of compounds of the formula 3 by the reduction of compounds of the formula 5. This reduction can be achieved using standard methodology well known to those of skill in the art, preferably using a Raney nickel catalyst with hydrogen in a solvent such as dimethylformamide (DMF), tetrahydrofuran (THF), 1,4-dioxane, isopropanol, methanol or ethanol, preferably ethanol, in the presence of triethylamine. Other reducing agents that can be employed for this reduction include, but are not limited to, palladium with hydrogen ( $\text{Pd}/\text{H}_2$ ) or ammonium formate, tin(II) chloride ( $\text{SnCl}_2$ ), iron/hydrochloric acid ( $\text{Fe}/\text{HCl}$ ), iron/acetic acid ( $\text{Fe}/\text{HOAc}$ ), or sodium hydrogen sulfide/sodium sulfide ( $\text{NaSH}/\text{NaS}_2$ ), in appropriate solvents such as ethyl acetate, DMF, N-methylpyrrolidinone (NMP), methanol, ethanol, isopropanol, dimethylacetamide (DMA), water or THF.

-23-

Scheme D

Scheme D illustrates a method of preparing compounds of the formula 3 by basic hydrolysis of the corresponding compounds of the formula 6. This can be done employing standard methodology well known to those of skill in the art, preferably using aqueous sodium hydroxide (NaOH) at reflux for several days.

Scheme E

Scheme E illustrates a method for preparing compounds of the formula 5 wherein Y<sup>1</sup> is (CH<sub>2</sub>)<sub>p</sub>, p is an integer from one to four and LG is Cl, Br, -OTs (tosylate), or -OMes (mesylate), by the alkylation of compounds of the formula 7 with a readily available piperazine of formula 8. This alkylation can be performed in a suitable polar solvent such as DMF, DMSO, ethyl acetate or acetonitrile, preferably acetonitrile, in the presence of a suitable base such as triethylamine or potassium carbonate, preferably K<sub>2</sub>CO<sub>3</sub>, with or without the addition of a small amount of water. The reaction is maintained at a temperature from about 25 °C to about the reflux temperature of the solvent for about 1 to about 24 hours, preferably 15 hours, or heated in a microwave reactor at about 150 °C for about 1-2 hours.

-24-

Scheme F

- 5            Scheme F illustrates a method for preparing compounds of the formula 5 from the corresponding compounds of the formula 9 wherein Y<sup>2</sup> is (CH<sub>2</sub>)<sub>p</sub> and p is an integer of from one to three, by amide bond coupling with piperidines of the formula 8 followed by reduction of the amide bond in 10. Step A can be accomplished using any standard peptide coupling agent, preferably bis(2-oxo-3-oxazolidinyl)phosphonic chloride (BOP-Cl) at 0 °C to about ambient temperature, for a period of about 1 hour to about 24 hours, in an inert solvent such as dichloroethane or CH<sub>2</sub>Cl<sub>2</sub>, preferably CH<sub>2</sub>Cl<sub>2</sub>, to form the corresponding compounds of formula 10. The reduction of compounds of the formula 10 to those of the formula 5 can be performed using any standard reducing agent, preferably using borane dimethylsulfide in toluene at reflux for about 1 hour to about 24 hours.
- 10
- 15

Scheme G

Scheme G illustrates a method for preparing compounds of the formula **9** wherein  $Y^2$  is  $(CH_2)_p$  and  $p$  is an integer from one to four, from the corresponding compounds of formula **11**. Compounds of the formula **11** can be converted into compounds of the formula **7** wherein LG is Cl, Br, -OTs, or -OMs (Reaction A), using standard methodology well known to those of skill in the art. Compounds of the formula **7** can be converted into compounds of the formula **12** by displacement of the leaving group (LG) with a suitable source of cyanide anion such as sodium cyanide (NaCN) or, preferably, potassium cyanide, in a polar solvent such as dimethylformamide, dimethylsulfoxide, or a water/ethanol mixture, at a temperature from about 0 °C to about 100 °C, for about 1 hour to 24 hours (Reaction B). The preferred conditions are potassium cyanide in a 50:50 mixture of water:ethanol at about 60 °C for about 1 hour. Compounds of the formula **9** can then be prepared by hydrolysis of the nitrile functionality under standard basic or, preferably, acidic conditions, preferably employing a  $H_2O/AcOH/HCl$  mixture at a temperature from about 0 °C to about 100 °C, preferably at about 90 °C, for about 5 hours, to give the desired acids (Reaction C).

-26-

## Scheme H

- Scheme H illustrates a method for preparing compounds of the formula 5 wherein A is  $-\text{CH}_2\text{CH}_2-$ ,  $\text{X}^1$  is methyl and  $\text{X}^2$  is hydrogen, from compounds of the formula 13 by formation of the enamine of the formula 15 followed by reduction of this enamine using standard methodology. The reaction of compounds of the formula 13 with dimethylformamide dimethylacetal in DMF gives compounds of the formula 14. This reaction is carried out as described in Vetelino, M. G.; Coe, J. W., *TL* **1994**, *35*, 219-222. The addition of piperazines of the formula 8 to compounds of the formula 14, followed by reduction of the resulting enamine, as described in Urban, F. J.; Breitenbach, R.; Gonyaw, D., *Synth. Commun.* **1996**, *26*, 1629-1638, gives the corresponding compounds of formula 5. Alternatively, the piperazines of the formula 8 can be initially condensed with dimethylformamide dimethylacetal, preferably at about 100 °C for about 6 hours, and then reacted further with compounds of the formula 13 in DMF, preferably at about 100 °C, for about 1-2 days, to give the enamines of formula 15, which can then be carried forward to form compounds of the formula 5 as previously described.

-27-

Scheme I

Scheme I illustrates a method for preparing compounds of the formula 9 wherein U is nitrogen and Y<sup>2</sup> is methylene. Substituted 2-halopyridines of the formula 15 wherein Hal is halo, preferably chlorine, can be converted into compounds of the formula 16 by the process described in Ujjainwalla, F., Walsh, T. F., *7L* 2001, 42, 6441-6445. Reaction of compounds of the formula 15 with sodium hydride and t-butyl methyl malonate yields the corresponding compounds of formula 16. Treatment of compounds of the formula 16 with trifluoroacetic acid in dichloromethane, at a temperature from about 0°C to about 50°C, preferably at about 25°C, leads to the formation of the corresponding compounds of formula 9.

Scheme J

Scheme J illustrates a method for preparing compounds of the formula 6 wherein Y<sup>3</sup> is (CH<sub>2</sub>)<sub>p</sub> wherein p is an integer from one to three and X<sup>1</sup> and X<sup>2</sup> are alkyl, from compounds of the formula 17. Compounds of the formula 17 can be reacted with compounds of the formula Hal-Y<sup>3</sup>-COCl (wherein Hal is bromo or chloro, preferably chloro) in an appropriate

-28-

inert solvent like carbon disulfide or dichloromethane, preferably dichloromethane, in the presence of a Lewis acid like aluminum chloride, at a temperature of about -78 °C to about 25 °C, preferably at about 25 °C, for about 1 to about 24 hours. Compounds of the formula 18 can be reduced to the corresponding compounds of formula 6 using triethylsilane/trifluoroacetic acid at a temperature between about -78°C and about 50°C, preferably from about 0°C to about 45°C, in a polar solvent such as dichloroethane or dichloromethane, preferably dichloromethane.

Scheme K

Scheme K illustrates a method for preparing compounds of the formula 5 wherein  $X^1$  and  $X^2$  are hydrogen. Nitration of compounds of the formula 19, employing standard conditions well known to those of skill in the art, such as nitric acid or potassium nitrate in the presence of an acid such as hydrochloric acid or sulfuric acid, or, preferably, ammonium nitrate in the presence of trifluoroacetic acid anhydride, leads to the formation of the corresponding compounds of formula 5a.

Scheme L

-29-

Scheme L illustrates a method of preparing compounds of formula 11, wherein  $Y^2$  is  $(CH_2)_{p+1}$  and p is an integer from 0 to 3, from compounds of formula 9, wherein  $Y^1$  is  $(CH_2)_p$  and p is defined as above. Compounds of the formula 11 can be prepared from compounds of formula 9 by reduction using lithium aluminum hydride or borane in an appropriate solvent such as THF or ether. A preferred solvent is borane in THF.

Scheme M illustrates a method of preparing compounds of the formula 22 from compounds of the formula 3.

Scheme M

Referring to Scheme M, compounds of formula 22 (wherein  $n = 1$ ) can be prepared from compounds of formula 3 by treatment of compounds of formula 3 with o-phthalaldehyde in acetonitrile at reflux in the presence of a catalytic amount of acetic acid as described in Azumaya, I, et. al. *J. Amer. Chem. Soc.*, **1991**, 2833. Compounds of formula 22 (wherein  $n = 2$ ) can be prepared from compounds of formula 3 using the procedures described in Cheng, C., et. al. *J. Heterocyclic Chem.*, **1995**, 73.

The preparation of other compounds of the formula 1 not specifically described in the foregoing experimental section can be accomplished using combinations of the reactions described above that will be apparent to those skilled in the art.

In each of the reactions discussed or illustrated above, pressure is not critical unless otherwise indicated. Pressures from about 0.5 atmospheres to about 5 atmospheres are generally acceptable, and

-30-

ambient pressure, i.e., about 1 atmosphere, is preferred as a matter of convenience.

5 The compounds of the formula 1, and the intermediates shown in the above reaction schemes can be isolated and purified by conventional procedures, such as recrystallization or chromatographic separation.

10 The compounds of the formula 1 and their pharmaceutically acceptable salts can be administered to mammals via either the oral, parenteral (such as subcutaneous, intravenous, intramuscular, intrasternal and infusion techniques), rectal, buccal or intranasal routes. In general, these compounds are most desirably administered in doses ranging from about 3 mg to about 600 mg per day, in single or divided doses (i.e., from 1 to 4 doses per day), although variations will necessarily occur depending upon the species, weight and condition of the patient being treated, the patient's individual response to said medicament, the nature and severity of  
15 the particular disorder being treated, as well as on the type of pharmaceutical formulation chosen and the overall time period and intervals over which such administration is carried out. However, a dosage level that is in the range of about 25 mg to about 100 mg per day is most desirably employed. In some instances, dosage levels below the lower limit of the  
20 aforesaid range may be more than adequate, while in other cases still larger doses may be employed without causing any harmful side effects, provided that such higher dose levels are first divided into several small doses for administration throughout the day.

25 The compounds of the present invention may be administered alone or in combination with pharmaceutically acceptable carriers or diluents by any of the routes previously indicated, and such administration may be carried out in single or multiple doses. More particularly, the novel therapeutic agents of this invention can be administered in a wide variety of different dosage forms, i.e., they may be combined with various  
30 pharmaceutically acceptable inert carriers in the form of tablets, capsules, lozenges, troches, hard candies, suppositories, jellies, gels, pastes, ointments, aqueous suspensions, injectable solutions, elixirs, syrups, and the like. Such carriers include solid diluents or fillers, sterile aqueous media

-31-

and various non-toxic organic solvents, etc. Moreover, oral pharmaceutical compositions can be suitably sweetened and/or flavored. In general, the weight ratio of the novel compounds of this invention to the pharmaceutically acceptable carrier will be in the range from about 1:6 to about 2:1, and preferably from about 1:4 to about 1:1.

For oral administration, tablets containing various excipients such as microcrystalline cellulose, sodium citrate, calcium carbonate, dicalcium phosphate and glycine may be employed along with various disintegrants such as starch (and preferably corn, potato or tapioca starch), alginic acid and certain complex silicates, together with granulation binders like polyvinylpyrrolidone, sucrose, gelatin and acacia. Additionally, lubricating agents such as magnesium stearate, sodium lauryl sulfate and talc are often very useful for tabletting purposes. Solid compositions of a similar type may also be employed as fillers in gelatin capsules; preferred materials in this connection also include lactose or milk sugar as well as high molecular weight polyethylene glycols. When aqueous suspensions and/or elixirs are desired for oral administration, the active ingredient may be combined with various sweetening or flavoring agents, coloring matter or dyes, and, if so desired, emulsifying and/or suspending agents as well, together with such diluents as water, ethanol, propylene glycol, glycerin and various like combinations thereof.

For parenteral administration, solutions of a compound of the present invention in either sesame or peanut oil or in aqueous propylene glycol may be employed. The aqueous solutions should be suitably buffered (preferably pH greater than 8) if necessary and the liquid diluent first rendered isotonic. These aqueous solutions are suitable for intravenous injection purposes. The oily solutions are suitable for intra-articular, intra-muscular and subcutaneous injection purposes. The preparation of all these solutions under sterile conditions is readily accomplished by standard pharmaceutical techniques well known to those skilled in the art.

This invention relates to methods of treating anxiety, depression, schizophrenia and the other disorders referred to in the description of the

-32-

methods of the present invention, wherein a novel compound of this invention and one or more of the other active agents referred to above (e.g., an NK1 receptor antagonist, tricyclic antidepressant, 5HT1D receptor antagonist, or serotonin reuptake inhibitor) are administered together, as part of the same pharmaceutical composition, as well as to methods in which such active agents are administered separately as part of an appropriate dose regimen designed to obtain the benefits of the combination therapy. The appropriate dose regimen, the amount of each dose of an active agent administered, and the specific intervals between doses of each active agent will depend upon the subject being treated, the specific active agent being administered and the nature and severity of the specific disorder or condition being treated. In general, the novel compounds of this invention, when used as a single active agent or in combination with another active agent, will be administered to an adult human in an amount from about 3 mg to about 600 mg per day, in single or divided doses, preferably from about 25 to about 100 mg per day. Such compounds may be administered on a regimen of up to 6 times per day, preferably 1 to 4 times per day, especially 2 times per day and most especially once daily. Variations may nevertheless occur depending on the species, weight and condition of the patient being treated, the patient's individual response to said medicament, the nature and severity of the particular disorder being treated, as well as on the type of pharmaceutical formulation chosen and the overall time period and intervals over which such administration is carried out. In some instances, dosage levels below the lower limit of the aforesaid range may be more than adequate, while in other cases still larger doses may be employed without causing any harmful side effect, provided that such larger doses are first divided into several small doses for administration throughout the day.

A proposed daily dose of a 5HT reuptake inhibitor, preferably sertraline, in the combination methods and compositions of this invention, for oral, parenteral or buccal administration to the average adult human for the treatment of the conditions referred to above, is from about 0.1 mg to about 2000 mg, preferably from about 1 mg to about 200 mg of the 5HT

-33-

reuptake inhibitor per unit dose, which could be administered, for example, 1 to 4 times per day. A proposed daily dose of a 5HT1D receptor antagonist in the combination methods and compositions of this invention, for oral, parenteral, rectal or buccal administration to the average adult human for the treatment of the conditions referred to above, is from about 0.01 mg to about 2000 mg, preferably from about 0.1 mg to about 200 mg of the 5HT1D receptor antagonist per unit dose, which could be administered, for example, 1 to 4 times per day.

For intranasal administration or administration by inhalation, the novel compounds of the invention are conveniently delivered in the form of a solution or suspension from a pump spray container that is squeezed or pumped by the patient or as an aerosol spray presentation from a pressurized container or a nebulizer, with the use of a suitable propellant, *e.g.*, dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, carbon dioxide or other suitable gas. In the case of a pressurized aerosol, the dosage unit may be determined by providing a valve to deliver a metered amount. The pressurized container or nebulizer may contain a solution or suspension of the active compound. Capsules and cartridges (made, for example, from gelatin) for use in an inhaler or insufflator may be formulated containing a powder mix of a compound of the invention and a suitable powder base such as lactose or starch. Formulations of the active compounds of this invention for treatment of the conditions referred to above in the average adult human are preferably prepared so that each metered dose or "puff" of aerosol contains 20  $\mu$ g to 1000  $\mu$ g of active compound. The overall daily dose with an aerosol will be within the range 100  $\mu$ g to 10 mg. Administration may be several times daily, for example 2, 3, 4 or 8 times, giving for example, 1, 2 or 3 doses each time.

The ability of the compounds of this invention to bind to the dopamine D2 and serotonin 2A (5HT2A) receptors can be determined using conventional radioligand receptor binding assays. All receptors can be heterologously expressed in cell lines and experiments conducted in membrane preparations from the cell lines using procedures outlined

-34-

below.  $IC_{50}$  concentrations can be determined by nonlinear regression of concentration-dependent reduction in specific binding. The Cheng-Prussoff equation can be used to convert the  $IC_{50}$  to  $K_i$  concentrations.

5     Dopamine D2 Receptor Binding:

[ $^3H$ ]Spiperone binding to a membrane preparation from CHO-hD2L cells is carried out in 250  $\mu$ l of 50 mM Tris-HCl buffer containing 100 mM NaCl, 1 mM  $MgCl_2$  and 1% DMSO at pH 7.4. Duplicate samples containing (in order of addition) the test compounds, 0.4 nM [ $^3H$ ]spiperone and approximately 12  $\mu$ g protein are incubated for 120 minutes at room temperature. Bound radioligand is separated by rapid filtration under reduced pressure through Whatman GF/B glass fiber filters previously treated with 0.3% polyethyleneimine. Radioactivity retained on the filter is determined by liquid scintillation spectrophotometry.

15       The title compounds of Examples 1 – 524 were tested using the above assay, in which specific binding determined in the presence of 1 mM haloperidol was 95%. All of the title compounds of Examples 1 – 524 exhibited  $IC_{50}$  values less than or equal to 1  $\mu$ M. The title compound of Example 102 exhibited a  $K_i$  of 8.2nM. The title compound of Example 364 exhibited a  $K_i$  of 8.58nM. The title compound of Example 27 exhibited a  $K_i$  of 6.32nM.

20     Serotonin 2A Binding:

[ $^3H$ ] Ketanserin binding to Swiss-h5HT2A cell membranes can be carried out in 250  $\mu$ l of 50 mM Tris-HCl buffer pH 7.4. Duplicate samples containing (in order of addition) test compounds, 1.0 nM [ $^3H$ ]ketanserin, and approximately 75  $\mu$ g protein are incubated for 120 minutes at room temperature. Bound radioligand is separated by rapid filtration under reduced pressure through Whatman GF/B glass fiber filters previously treated with 0.3% polyethyleneimine. Radioactivity retained on the filter is determined by liquid scintillation spectrophotometry.

-35-

The title compounds of Examples 1 – 524 were tested using the above assay, in which specific binding determined in the presence of 1 mM ketanserin was 90%. All of the title compounds of Examples 1 – 524 exhibited  $IC_{50}$  values less than or equal to 1  $\mu$ M. The title compound of Example 102 exhibited a  $K_i$  of 0.25 nM. The title compound of Example 27 exhibited a  $K_i$  of 1.46 nM. The title compound of Example 364 exhibited a  $K_i$  of 0.29 nM.

The following Examples illustrate the preparation of the compounds of the present invention. Melting points are uncorrected. NMR data are reported in parts per million and are referenced to the deuterium lock signal from the sample solvent.

## EXAMPLES

### Preparation 1

#### 4-NITROPHENETHYL TOSYLATE

4-Nitrophenethyl alcohol (15 g, 89.7 mmol) was dissolved in 450 mL methylene chloride. Triethylamine (37.5 mL, 269 mmol) was added over 10 min and the reaction mixture was stirred at 0 °C for 1 hour (h). Tosyl chloride (20.52 g, 110 mmol) was added slowly to the mixture at 0 °C. The reaction was stirred at room temperature (rt) overnight and was concentrated. The residue was dissolved in methylene chloride and washed with water, 1 N HCl, then water. The organic layer was dried over sodium sulfate and evaporated. The residue was triturated with hexanes and 25.32 g of white solid was collected. Yield 88 %;  $^1H$  NMR (400 MHz,  $CDCl_3$ )  $\delta$  8.07 (d,  $J$  = 8 Hz, 2H), 7.63 (d,  $J$  = 8 Hz, 2H), 7.24 (d, 4 H), 4.26 (t,  $J$  = 6 Hz, 2 H), 3.04 (t,  $J$  = 6 Hz, 2 H), 2.41 (s, 3 H).

### Preparation 2

#### 3-[4-[2-(4-NITRO-PHENYL)-ETHYL]-PIPERAZIN-1-YL]-1,2-BENZISOTHIAZOLE

-36-

Excess dried, -325 mesh potassium carbonate (20 g) was diluted in 500 mL acetone and 3-piperazin-1-yl-benzisothiazole hydrochloride (13.05 g, 51.2 mmol) was added. The mixture was stirred for 15 min before 4-nitrophenethyl tosylate (14.93 g, 46.5 mmol) and catalytic 18-crown-6 (0.5 g, 1.9 mmol) was added. The mixture was stirred at reflux for 42 h. After cooling, the salts were filtered off and washed with acetone and the filtrate was concentrated. The residue was taken up in methylene chloride and washed with water. The organic layer was dried over sodium sulfate, and concentrated. The residue was triturated with ethyl acetate and the collected solid was washed with ethyl ether and dried in vacuo to afford 14.86 g of a bright yellow solid. Yield 84%; mp 99 °C; MS (APCI): 369 [M+H]<sup>+</sup>.

### Preparation 3

#### 4-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]- PHENYLAMINE

3-{4-[2-(4-Nitro-phenyl)-ethyl]-piperazin-1-yl}-1,2-benzisothiazole (942 mg, 2.56 mmol) was dissolved in 50 mL of THF treated with triethylamine (0.3 mL) and with wet Raney nickel (0.14 g). The resulting mixture was placed on a shaker type hydrogenator, purged with hydrogen, pressurized (two re-pressurizations were needed to maintain the pressure between 3 and 17 psig) and shaken at room temperature for 64 hours. The resulting mixture was filtered to remove the catalyst then filtered a second time over celite before the filtrate was concentrated. The resultant white solid was dried in vacuo (830 mg, 2.45 mmol). Yield 96%; mp 154 °C; MS (APCI): 339 [M+H]<sup>+</sup>.

### Example 1

#### N-[4-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]- PHENYL]-2,2-DIMETHYL-PROPIONAMIDE

4-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine (135 mg, 0.4 mmol) was dissolved in 5 ml THF and triethylamine was

-37-

added (112  $\mu$ L, 0.8 mmol). Trimethyl acetyl chloride (49.3  $\mu$ L, 0.4 mmol) was added under stirring and the reaction stirred at room temperature overnight. The reaction mixture was concentrated under nitrogen and dissolved in 5 ml methylene chloride and then washed with water. The organic layer was concentrated and evaluated by LCMS. The mixture was purified by MPLC using a Biotage 40s prepacked silica gel cartridge eluting with 3% methanol in methylene chloride. N-{4-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenyl}-2,2-dimethyl-propionamide (156 mg) was isolated in 98.2% purity @ 254 nm; LCMS (APCI): 423 [M+H]<sup>+</sup>

The amides of Examples 2-36 were synthesized in combinatorial library format using appropriate acid chloride starting materials and phenyl amines on a 0.4 mmol scale and following the steps as outlined in Example 1. The crude products were dissolved in CH<sub>2</sub>Cl<sub>2</sub> and purified by MPLC using a Biotage 40s prepacked silica gel cartridge and eluting with 3% methanol in methylene chloride.

#### Preparation 4

##### 2-NITROPHENETHYL TOSYLATE

2-Nitrophenethyl tosylate was prepared according to the general method as outlined in Preparation 1 starting from 2-nitrophenethyl alcohol (15 g, 89.7 mmol) and tosyl chloride (20.52 g, 110 mmol). The residue was triturated with hexanes and 26.44 g of off white crystals were collected. Yield 92 %; <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>)  $\delta$  7.93 (d,  $J$  = 9.7 Hz, 1H), 7.91 (d,  $J$  = 9.7 Hz, 2 H), 7.64 (t, 1 H), 7.39 (m, 2 H), 7.24 (s, 2H), 4.32 (t,  $J$  = 6 Hz, 2 H), 3.24 (t,  $J$  = 6Hz, 2 H), 2.41 (s, 3 H).

#### Preparation 5

##### 3-{4-[2-(2-NITRO-PHENYL)-ETHYL]-PIPERAZIN-1-YL}-1,2-BENZISOTHIAZOLE

3-{4-[2-(2-Nitro-phenyl)-ethyl]-piperazin-1-yl}-1,2-benzisothiazole was prepared according to the general method as outlined in Preparation

-38-

2 starting with 3-piperazin-1-yl-benzisothiazole hydrochloride (13.37 g, 52.4 mmol) and 2-nitrophenethyl tosylate (15.3 g, 47.7 mmol). The product was isolated via column chromatography to afford 13.08 g of a viscous, brown liquid. Yield 75%; MS (APCI): 369 [M+H]<sup>+</sup>.

5

### Preparation 6

#### 2-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-

#### PHENYLAMINE

2-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine was prepared according to the general method as outlined in Preparation 3 starting from 3-[4-[2-(2-nitro-phenyl)-ethyl]-piperazin-1-yl]-1,2-benzisothiazole (12.93 g, 35.13 mmol). The resultant white solid was triturated with ethyl ether and dried in vacuo (7.88 g). Yield 66%; mp 149 °C; MS (APCI): 339 [M+H]<sup>+</sup>.

**Preparation 10****3-[4-[2-(4-NITRO-PHENOXY)-ETHYL]-PIPERAZIN-1-YL]-1,2-BENZISOTHIAZOLE**

Excess dried, -325 mesh potassium carbonate (257 mg, 1.86 mmol) was diluted in 4 mL acetonitrile and 3-piperazin-1-yl-benzisothiazole hydrochloride (395 mg, 1.55 mmol), catalytic potassium iodide, and 1(2-chloroethoxy)-4-nitrobenzene (250 mg, 1.20 mmol) were added. This mixture was sealed in a Smith microwave vial and heated on the Smith Workstation at 150 °C for 1.5 h. After cooling, the salts were filtered off and washed with acetonitrile and the filtrate was concentrated. The residue was taken up in methylene chloride and washed with water. The organic layer was dried over sodium sulfate, and concentrated to afford 530 mg of a yellow solid. Yield 89%; 92% HPLC purity at 214 nm; mp 115 °C; MS (APCI): 385 [M+H]<sup>+</sup>.

**Preparation 12****1-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-2-(4,5-DIMETHOXY-2-NITRO-PHENYL)-ETHANONE**

3-Piperazin-1-yl-benzisothiazole hydrochloride (5.29 g, 20.7 mmol) and 4,5-dimethoxy-2-nitrophenylacetic acid (5 g, 20.7 mmol) were combined in 200 mL methylene chloride with triethylamine (5.77 mL, 41.4 mmol). This solution stirred for 15 min before bis-(2-oxo-3-oxazolidinyl) phosphinic chloride (5.26 g, 20.7 mmol) was added. After stirring overnight at rt, the reaction was quenched with water and extracted into methylene chloride. The organic layer was washed with 0.5 N HCl, water, sodium bicarbonate then water before it was dried over Na<sub>2</sub>SO<sub>4</sub> and concentrated. The residue was taken up in methylene chloride and washed with water. The organic layer was dried over sodium sulfate, and concentrated then purified by MPLC using a Biotage preppacked silica gel cartridge eluting with 3% methanol in methylene chloride to afford 6.5 g of a tan solid. **Preparation 15****(5-FLUORO-2-NITRO-PHENYL)-ACETIC ACID**

3-methyl phenethyl alcohol (5 g, 36.7 mmol) was diluted in 30 mL of chloroform and ammonium nitrate (3.12 g, 38.9 mmol) was added. The reaction mixture was cooled to 0 °C and trifluoro acetic acid anhydride (16.02 mL, 113 mmol) was added dropwise. The reaction stirred at 0 °C for 3 hours before water was added to slowly quench the reaction. The chloroform layer was washed with water then collected and dried over Na<sub>2</sub>SO<sub>4</sub> then concentrated. The desired isomer crystallized out of the crude solution in ethyl acetate and was then triturated with acetonitrile to afford 5.25 g of the desired isomer as a brown solid. Yield 87%; MS (APCI): 199 [M-H].

#### 2-[2-(4-1,2-BENZISOTHAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-PHENYL-ISOPROPYL-AMINE

A round bottomed flask was charged with 4.9 g (0.015 mol) 2-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine, 50 mL  $\text{ClCH}_2\text{CH}_2\text{Cl}$ , 1.2 mL (0.016 mol) acetone, 0.93 mL (0.016 mol) HOAc, and 5.2 g (0.024 mol)  $\text{NaBH}(\text{OAc})_3$ . After stirring for 15 h at rt the reaction was quenched with 50 mL 2M  $\text{K}_2\text{CO}_3$ . The organic layer was separated, dried and concentrated in vacuo to give 5.5 g (100% yield) of the desired material as a yellow-orange oil. MS (APCI): 381  $[\text{M}+\text{H}]^+$ .  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  7.90 (d,  $J$  = 8 Hz, 1H), 7.70 (d,  $J$  = 8 Hz, 1H), 7.47-7.42 (m, 1H), 7.35-7.31 (m, 1H), 7.03-7.00 (m, 2H), 6.54-6.50 (m, 2H), 3.61-3.55 (m, 5H), 2.75-2.71 (m, 6H), 2.65-2.60 (m, 2H), 1.18 (d,  $J$  = 6 Hz, 6H).

### Preparation 22

#### 3-METHYL-2-NITROBENZYL BROMIDE

A round bottomed flask was charged with 5.0 g (0.029 mol) of 3-methyl-2-nitrobenzyl alcohol and 100 mL of anhydrous acetonitrile. The reaction solution was cooled to 0 °C and treated, portionwise, with 13.2 g (0.031 mol) triphenylphosphine perbromide ( $\text{Ph}_3\text{P}\cdot\text{Br}_2$ ). The reaction was allowed to warm to rt overnight at which point the solvent was removed

-64-

and the resulting solids triturated with 50:50 ether:hexanes. The wash solvent was filtered through a fine frit and then concentrated to give a quantitative yield (7.03 g) of the desired material as a white solid.  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  7.36-7.34 (m, 2H), 7.33-7.24 (m, 1H), 4.45 (s, 2H), 2.33 (s, 3H).

### **Preparation 23**

#### **3-METHYL-2-NITROBENZYL CYANIDE**

A round bottomed flask was charged with 6.51 g (0.028 mol) of 3-methyl-2-nitrobenzyl bromide, 120 mL 1:1 EtOH:H<sub>2</sub>O, and 5.5 g KCN (0.084 mol). The reaction solution was heated to 60 °C for 2 h. The reaction was cooled and the volatiles removed in vacuo. The resulting solid was dissolved in 150 mL water and extracted with 300 mL ethyl acetate. The organic extracts were washed with brine, dried over  $\text{MgSO}_4$ , filtered, and concentrated. This gave 4.63 g (92% yield) of the desired material as a slightly yellow solid.  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  7.45-7.41 (m, 2H), 7.33-7.31 (m, 1H), 3.77 (s, 2H), 2.36 (s, 3H).

### **Preparation 24**

#### **3-METHYL-2-NITRO-PHENYLACETIC ACID**

A 2 dram vial was charged with 0.1 g (0.5 mmol) 3-methyl-2-nitrobenzyl cyanide and 0.4 mL H<sub>2</sub>O. To this reaction slurry was added, dropwise with stirring, 0.5 mL concentrated HCl followed by 50 drops of HOAc. The reaction mixture was then heated to 90 °C for 5 h. Upon cooling of the solution a white ppt formed. This white ppt was filtered, washed with water, and dried to give 0.076 g (70% yield) of light yellow crystals. MS (APCI): 195 [M-H]<sup>+</sup>.

### **Preparation 25**

#### **3-METHYL-2-NITRO-PHENETHYL ALCOHOL**

A round bottomed flask was charged with 1.2 g (6 mmol) 3-methyl-2-nitro-phenylacetic acid and 24 mL anhydrous THF. The reaction was

-65-

cooled to 0 °C and then treated with 4.0 mL 2M BH<sub>3</sub>-DMS in THF (7.8 mmol) over 5 m. The reaction was allowed to warm to rt overnight. The volatile solvents were removed in vacuo and the resulting material was partitioned between EtOAc/1 M NaHCO<sub>3</sub>. The organic extracts were washed with brine, dried over MgSO<sub>4</sub>, filtered, and concentrated in vacuo to give 1.06 g (95% yield) as a light, orange oil. <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 7.32-7.16 (m, 3H), 3.84 (t, J = 6.4 Hz, 2H), 2.81 (t, J = 6.4 Hz, 2H), 2.30 (s, 3H).

### Preparation 26

#### 3-METHYL-2-NITRO PHENETHYL TOSYLATE

3-Methyl-2-nitrophenethyl tosylate was prepared according to the general method as outlined in Preparation 1 starting from 3-methyl-2-nitrophenethyl alcohol (1.06 g, 5.86 mmol) and tosyl chloride (1.34 g, 7 mmol). 2 g product was taken crude to the next step. ### Preparation 27

#### 3-[4-[2-(3-METHYL-2-NITRO-PHENYL)-ETHYL]-PIPERAZIN-1-YL]-1,2-BENZISOTHIAZOLE

3-[4-[2-(3-Methyl-2-nitro-phenyl)-ethyl]-piperazin-1-yl]-1,2-benzisothiazole was prepared according to the general method as outlined in Preparation 2 starting with 3-piperazin-1-yl-benzisothiazole hydrochloride (1.71 g, 6.7 mmol) and 3-methyl-2-nitrophenethyl tosylate (1.8 g, 5.37 mmol). The product was isolated via column chromatography to afford 290 mg of brown oil. Yield 11%; MS (APCI): 383 [M+H]<sup>+</sup>.

### Preparation 28

#### 2-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-6-METHYL-PHENYLAMINE

-66-

2-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-6-methyl-phenylamine was prepared according to the general method as outlined in Preparation 3 starting from 3-[4-[2-(3-methyl-2-nitro-phenyl)-ethyl]-piperazin-1-yl]-1,2-benzisothiazole (290 mg, 0.76 mmol). The product was purified via column chromatography and isolated as a yellow oil (65 mg). Yield 24%; MS (APCI): 353 [M+H]<sup>+</sup>.

### Example 72

#### N-[2-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-6-METHYL-PHENYL]-ACETAMIDE

Starting from 2-[2-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-6-methyl-phenylamine (65 mg, 0.185 mmol) and acetyl chloride (14  $\mu$ L, 0.194 mmol) and following the procedure as outlined in Example 1, 46 mg of N-[2-[2-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-6-methyl-phenyl]-acetamide was isolated as a pink foam in 100% purity @ 254 nm; LCMS (APCI): 395 [M+H]<sup>+</sup>.

### Example 73

#### 3-METHYL-BUT-2-ENOIC ACID {3-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-PHENYL}-AMIDE

Starting from {3-[2-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenyl}-amine (338 mg, 1 mmol) and 3,3 dimethyl acryloyl chloride (116  $\mu$ L, 1.05 mmol) and following the procedure as outlined in Example 1, 406 mg of 3-methyl-but-2-enoic acid {3-[2-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenyl}-amide was isolated as a light yellow solid in 100% purity @ 254 nm; LCMS (APCI): 421 [M+H]<sup>+</sup>.

### Preparation 29

#### 1-(3-BROMO-PROPYL)-2-NITRO-BENZENE AND 1-(3-BROMO-PROPYL)-4-NITRO-BENZENE

(3-Bromo-propyl)-benzene (10 g) was dissolved in 60 mL methylene chloride. Ammonium nitrate (4.78 g) and trifluoroacetic acid

-67-

(90.4 mL) was added slowly. The reaction was stirred at rt for 4 h and was concentrated. The residue was dissolved in water and stirred overnight. The water was decanted off. The oil was dissolved in ethyl acetate and washed with water and sat. NaCl. The organic layer was dried over sodium sulfate and concentrated. The residue was purified using an ISCO autocolumn eluting with 80% ethyl acetate in hexanes to afford a mixture of ortho and para isomers. Yield 65 %;  $^1\text{H}$  NMR (400 MHz,  $\text{CDCl}_3$ )  $\delta$  8.05 (d, J = 8 Hz, 2H), 7.82 (d, J = 8.0 Hz, 1H), 7.46 (d, J = 7.5 Hz, 1H), 7.29 (m, 4H), 3.36 (t, J = 6.59, 2H), 3.31 (t, J = 6.59, 6.34 Hz, 2H), 2.94 (t, J = 8.05, 7.08 Hz, 2H), 2.81 (t, J = 7.81, 7.07 Hz, 2H), 2.09 (m, 4H).

### Preparation 30

#### 3-{4-[3-(2-NITRO-PHENYL)-PROPYL]-PIPERAZIN-1-YL}-1,2-BENZOISOTHIAZOLE AND 3-{4-[3-(4-NITRO-PHENYL)-PROPYL]-PIPERAZIN-1-YL}-1,2-BENZOISOTHIAZOLE

Excess dried, -325 mesh potassium carbonate (5.1 g) was diluted in 100 mL acetone. The mixture of ortho and para isomers of 1-(3-bromopropyl)-2-nitro-benzene (6.0 g, 24.6 mmol) and 3-piperazin-1-yl-benzoisothiazole (6.47 g, 29.5 mmol) was added. The mixture stirred at reflux for 72 h. After cooling, the mixture was diluted in ethyl acetate and washed with water. The organic layer was dried over sodium sulfate, and concentrated. The residue was purified and isomers separated using an ISCO autocolumn eluting with 80% ethyl acetate in hexanes to afford each isomer. Yield 39 %; MS (APCI): 383  $[\text{M}+\text{H}]^+$ .

### Preparation 31

#### 2-[3-(4-1,2-BENZOISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-PROPYL]-PHENYLAMINE

-68-

3-[4-[3-(2-Nitro-phenyl)-propyl]-piperazin-1-yl]-1,2-benzisothiazole (3.25 g, 8.5 mmol) was dissolved in 100 mL of THF treated with triethylamine (0.3 ml) and with wet Raney nickel (1.02 g). The resulting mixture was placed on a shaker type hydrogenator, purged with hydrogen, pressurized (29.8 psig) and shaken at room temperature for 16 hours. The resulting mixture was filtered to remove the catalyst then filtered a second time over celite before the filtrate was concentrated. The resultant solid was dried in vacuo (2.33 g, 6.61 mmol). Yield 78%; MS (APCI): 352 [M+H]<sup>+</sup>.

#### Example 74

##### N-[2-[3-(4-1,2-BENZOISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-PROPYL]-PHENYL]-2-(3-METHOXY-PHENYL)-ACETAMIDE

Starting from 2-[3-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-propyl]-phenylamine (200 mg) and 3-methoxyphenylacetyl chloride (0.088 mL) and following the procedure outlined in Example 1, 72 mg of N-[2-[3-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-propyl]-phenyl]-2-(3-methoxy-phenyl)-acetamide was isolated in 100% purity @ 254 nm; LCMS (APCI): 501 [M+H]<sup>+</sup>.

#### Example 75

##### N-[2-[3-(4,1,2-BENZOISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-PROPYL]-PHENYL]-2-(4-CHLORO-PHENYL)-ACETAMIDE

N-[2-[3-(4,1,2-Benzisothiazol-3-yl-piperazin-1-yl)-propyl]-phenyl]-2-(4-chloro-phenyl)-acetamide was prepared according to the procedure outlined in Example 1, starting with 2-[3-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-propyl]-phenylamine (200 mg) and 4-(chloromethyl)benzoyl chloride (107 mg). The resultant white solid was purified using an ISCO autocolumn eluting with 80% ethyl acetate in hexanes. N-[2-[3-(4,1,2-Benzisothiazol-3-yl-piperazin-1-yl)-propyl]-phenyl]-2-(4-chloro-phenyl)-acetamide was isolated in 100% purity @ 254 nm; LCMS (APCI): 505 [M+H]<sup>+</sup>.

PHENYL}-ACETAMIDE

4-[2-(4-Benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine  
was diluted to 0.20 M with anhydrous dichloromethane, then delivered to  
an 8 mL vial via pipette (0.20 mmol). To the amine solution was added  
base (0.4 M triethylamine in dichloromethane, 0.40 mmol). Isoxazole-5-  
carbonyl chloride was diluted to 0.20 M with dichloromethane, and added  
at rt (0.40 mmol). The solution was shaken overnight at rt. Polyamine  
scavenging resin was added (0.5 mmol). The solution was shaken  
overnight at rt, then filtered into an 8 mL vial. The filtrate was evaluated by  
MS, then concentrated using an HT-12 GeneVac. Crude was purified by  
HPLC (30x100 mm ODS-A C(18) 5u column). 4-[2-(4-Benzo[d]isothiazol-

PYRAZINE-2-CARBOXYLIC ACID {4-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-PHENYL}-AMIDE

4-[2-(4-Benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine  
5 was diluted to 0.40 M with anhydrous dichloromethane, then delivered to an 8 mL vial via pipette (0.2 mmol). To the amine solution was added base (0.4 M triethylamine in dichloromethane, 0.20 mmol). Pyrazine-2-carbonyl chloride was diluted to 0.40 M with dichloromethane, and added at rt (0.2 mmol). The reaction was shaken overnight at rt, then evaluated  
10 by MS. The reaction was concentrated using an HT-12 GeneVac, then purified by HPLC (30x100 mm ODS-A C(18) 5u column). Pyrazine-2-carboxylic acid {4-[2-(4-1,2-benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-phenyl}-amide was isolated in 88% purity @ 254 nm, LCMS (APCI): 445 [M+H]<sup>+</sup>.

15 The amides of Examples 204-265 were synthesized in combinatorial library format following the steps outlined in Example 203 on a 0.20 mmol scale using 4-[2-(4-benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine, 3-[2-(4-benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine, or 2-[2-(4-benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-  
20 phenylamine with appropriate acid chloride or chloroformate starting materials. The crude products were purified by HPLC (30x100 mm ODS-A C(18) 5u column).

methyl-amine was diluted to 0.20 M with anhydrous dichloroethane, then  
delivered to an 8 mL vial via pipette (0.20 mmol). To the amine solution  
was added base (0.4 M triethylamine in dichloroethane, 0.40 mmol).  
20 Acetyl chloride was diluted to 0.20 M with dichloroethane, and added at rt  
(0.2 mmol). The reaction was shaken overnight at 50 °C, then evaluated  
by MS. Polyamine scavenging resin was added (0.5 mmol). The solution  
was shaken overnight at rt, then filtered into an 8 mL vial. The reaction  
was concentrated using an HT-12 GeneVac, then purified by HPLC  
25 (30x100 mm ODS-A C(18) 5u column). N-[2-[2-(4-Benzo[d]isothiazol-3-yl-

4-[2-(4-Benzo[d]isothiazol-3-yl-piperazin-1-yl)-ethyl]-phenylamine  
was diluted to 0.3 M with anhydrous pyridine, then delivered to an 8 mL  
vial via pipette (0.225 mmol). Propane-1-sulfonyl chloride was diluted to  
1.0 M with anhydrous dichloromethane, and added to the amine solution at  
30 rt (0.40 mmol). The solution was stirred overnight at 45 °C. To the  
reaction mixture was added polyamine scavenging resin (0.30 mmol). The  
solution was stirred overnight at 45 °C, then filtered into an 8 mL vial. The

**Preparation 33**2-FLUORO-4-iodo-PHENYLAMINE

2-Fluoroaniline (54 g, 486 mmol) was added to a vigorously stirred  
10 solution of sodium bicarbonate (41 g, 486 mmol) in water (250 mL). The suspension was warmed to 60 °C on an oil bath and iodine (123 g, 486 mmol) was added portion-wise. After complete addition, the dark mixture was stirred for an additional 3 h at 60 °C. After cooling to rt, methylene chloride (300 mL) was added followed by saturated hydrogensulfite  
15 solution (300 mL). The biphasic system was vigorously stirred for an additional 10 min. The mixture was poured into a 2 L separatory funnel and the organic layer was released. The aqueous was further extracted with methylene chloride (3 x 200 mL) and the combined organics were washed with brine (200 mL) and dried over anhydrous sodium sulfate.  
20 After filtration, the solvent was removed to give a black crystalline solid. Hexane (300 mL) was added and the mixture was heated to reflux. The hexane was decanted from a black, insoluble syrup. The product crystallized from the hexane on cooling as fine yellow needles. 65 g (274 mmol) was isolated as a fine yellow solid. Yield: 56%; mp 53 °C; <sup>1</sup>H NMR  
25 (400 MHz, CDCl<sub>3</sub>) δ 8.1 (t, J = 8 Hz, 1 H), 7.4 (d, J = 6 Hz, 1 H), 7.2 (d, J = 6 Hz, 1 H).

**Preparation 34**N-(2-FLUORO-4-iodo-PHENYL)-ACETAMIDE

30 To a stirred solution of 2-fluoro-4-iodo-phenylamine (61 g, 257 mmol) in anhydrous pyridine (25 mL) was added drop-wise acetic anhydride (32.8 mL, 321 mmol) at such a rate to maintain the internal

temperature between 10 °C and 20 °C. At the end of the addition, the reaction was stirred for an additional 0.5 h at rt followed by heating on an oil bath (external temperature 50-60 °C). The reaction was monitored by thin layer chromatography. Once complete (ca. 1.5 h), the mixture was cooled and the reaction mixture solidified. The solid was slurried with cold ethanol (50 mL) and filtered. The solid was washed with cold ethanol (mL) and dried to a fine white crystalline material. The filtrate was concentrated and taken up in ethanol (20 mL) and cooled overnight. Further product was obtained. 63 g (226 mmol) was isolated as a fine white, crystalline solid. Yield: 88%; mp 153 °C; <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 8.15 (t, J = 8 Hz, 1 H), 7.33 (br s, 1 H), 7.49 (m, 2 H), 2.24 (s, 3 H, Me).

#### **N-(4-CYANO-2-FLUORO-PHENYL)-ACETAMIDE**

N-(2-Fluoro-4-iodo-phenyl)-acetamide (63 g, 226 mmol) was dissolved in HPMA (100 mL). Copper(I) cyanide (20.6 g, 230 mmol) was added and the mixture heated to an external temperature of 153 °C for 5 h. The hot reaction mixture was poured into water (1 L) with stirring. A large amount of solid formed. The solid was filtered and washed with water (200 mL). The solid was extracted by heating in a flask with methylene chloride (500 mL) for 15 min. The solid was filtered off, washed with methylene chloride (3 x 100 mL). The combined organic extracts were washed with brine (200 mL), dried over anhydrous sodium sulfate, filtered and concentrated to give a brown-orange solid. Ethanol (100 mL) was added and the mixture heated to reflux. The solid did not all dissolve. The cooled mixture was filtered to give a light brown solid. The filtrate was concentrated to ½ volume and cooled overnight to give a further crop of solid. The combined solids were washed with cold ethanol (30 mL) and dried under vacuum to give 30 g (168 mmol). Yield: 75%; mp 173 °C; <sup>1</sup>H NMR (400 MHz, DMSO-d<sub>6</sub>) δ 10.3 (br s, 1 H, NH), 8.3 (t, J = 8.2 Hz, 1 H), 7.9 (d, J = 10.7 Hz, 1 H), 7.67 (d, J = 10.7 Hz, 1 H), 2.16 (s, 3 H, Me).

**Preparation 36****N-(2-FLUORO-4-FORMYL-PHENYL)-ACETAMIDE**

Stannous chloride (98%, 17.3 g, 91.5 mmol) was placed in a dry 3-neck 500 mL round bottom flask under argon. Anhydrous diethyl ether (100 mL) was added via cannula. The suspension was stirred as dry HCl gas was bubbled in until the solid dissolved. Anhydrous methylene chloride (100 mL) was added via cannula to homogenize the two layers and the solution was stirred for an additional 0.5 h while a continuous stream of dry HCl gas was bubbled through the solution. N-(4-Cyano-2-fluoro-phenyl)-acetamide (10.5 g, 58.7 mmol) was added and the suspension stirred at rt for an additional 3 h under a continuous stream of dry HCl gas. During this time a sticky, yellow solid formed which eventually crystallized. The reaction mixture was left standing overnight after the introduction of HCL was stopped. The residue was partitioned between methylene chloride (100 mL) and water (100 mL) and the phases were separated. The aqueous phase was extracted with methylene chloride (100 mL) and the combined organic extracts were washed with brine (100 mL) and dried over anhydrous potassium carbonate (essential for purity of the product). Concentration of the solvent provided 10.5 g (57.7 mmol) of a crystalline residue. Yield: 98%; mp 133 °C; <sup>1</sup>H NMR (400 MHz, CDCl<sub>3</sub>) δ 10.1 (s, 1 H, NH), 9.9 (s, 1 H, CHO), 8.39 (t, J = 8.0 Hz, 1 H), 7.76-7.72 (m, 2 H), 2.18 (s, 3 H, Me).

**Preparation 37****N-(4-ACETYL-2-FLUORO-PHENYL)-ACETAMIDE**

N-(2-Fluoro-4-formyl-phenyl)-acetamide (10.5 g, 57.7 mmol) was dissolved in anhydrous THF (200 mL) in a dry 3-neck 500 mL round bottom flask under argon. Stirring was achieved with an overhead stirrer. A solution of 3.0 M methylmagnesium bromide (103 mL, 309 mmol) was slowly added dropwise over a 10 min. period under argon. The mixture was heated overnight on a 60 °C oil bath. The reaction mixture was cooled and then poured onto saturated ammonium chloride (300 mL) in ice

(200 g). The organic layer was decanted away. The aqueous layer was saturated with solid ammonium chloride and then extracted with methylene chloride (2 x 100 mL). The combined organic layers were dried over anhydrous sodium sulfate, filtered and concentrated to give an oil (9.4 g) which was directly used without further purification. The oil was dissolved in acetone (100 mL) and placed in a 21 °C water bath. A mixture of chromium(VI) oxide (5.1 g, 538 mmol), concentrated sulfuric acid (2.5 mL) and water (7.5 mL) was slowly added followed by water (75 mL). The dark brown solution was stirred for an additional 15 min. Saturated hydrogen sulfite solution (10 mL) was added and the green solution was extracted with methylene chloride (4 x 100 mL). The combined organic extracts were washed with brine (100 mL) and dried over anhydrous sodium sulfate. After filtration the solution was concentrated to give a yellow, brown residue. The residue was dissolved in boiling water (150 mL), decanted hot from a black insoluble oil and cooled. Crystallization provided 3.55 g (18.2 mmol) of the product as pale yellow needles. Yield: 32%; mp 149 °C; TLC(silica):  $R_f$  = 0.5 (ethyl acetate).

*N*-(4-Acetyl-2-fluoro-phenyl)-acetamide (3.55 g, 18.2 mmol) was dissolved in boiling chloroform (100 mL). Under reflux conditions, a solution of bromine (0.86 mL, 17.5 mmol) in chloroform (20 mL) was added. The reaction mixture was refluxed for an additional 20 min, then cooled, concentrated to give an orange residue. The residue was taken up in ethanol (50 mL) and then diethyl ether (20 mL) was added and the resulting solution cooled to 0 °C. A yellow solid precipitated over 48 h and was collected by filtration, washed with cold ethanol (10 mL) and dried to give 2.40 g (8.77 mmol) of the desired product as a yellow powder. Yield: 48.2%; mp 184 °C;  $^1\text{H}$  NMR (400 MHz, DMSO- $d_6$ )  $\delta$  10.15 (s, 1 H, NH), 8.29 (t,  $J$  = 8.0 Hz, 1 H), 7.88-7.83 (m, 2 H), 4.90 (s, 2 H,  $\text{CH}_2$ ), 2.17 (s, 3 H, Me).

N-[4-(2-chloro-ethyl)-2-methyl-phenyl]-N-methyl-acetamide (0.300 g, 1.153 mmol), 3-piperazin-1-yl-benzo[d]isothiazole hydrochloride (0.442 g, 1.729 mmol), potassium carbonate (0.237 g, 1.729 mmol), and potassium iodide (0.173 g, 1.153 mmol) in acetonitrile (3.5 mL) was subjected to 150 °C for 30 min. under microwave assistance using a Smith Personal Chemistry microwave. The reaction was diluted with H<sub>2</sub>O (50 mL) and CH<sub>2</sub>Cl<sub>2</sub> (100 mL). The layers were separated and the organics washed with 1N HCl (2x 25 mL). The aqueous layer was made basic and extracted with CH<sub>2</sub>Cl<sub>2</sub> (3x50 mL). The organics were dried (MgSO<sub>4</sub>), and concentrated to a solid residue. The residue was subjected to chromatography (MeOH:CH<sub>2</sub>Cl<sub>2</sub> 1:19) and collected as an amorphous residue and taken up in 1,4-dioxane and subjected to HCl gas for 10 min. The resulting solid was collected by filtration and dried at 50 °C under high

Starting with N-[4-(2-chloro-ethyl)-2-methyl-phenyl]-acetamide (0.194 g, 0.915 mmol) and 3-piperazin-1-yl-1H-indazole hydrochloride (0.328 g, 1.372 mmol), and following the procedure outlined in Example 15 501, N-[4-[2-[4-(1H-indazol-3-yl)-piperazin-1-yl]-ethyl]-2-methyl-phenyl]-acetamide was obtained as its hydrochloride salt (0.038 g, 0.101 mmol). Yield = 11%; 96% purity at 254nm; LCMS (APCI): 378.3 [M+H]<sup>+</sup>, <sup>1</sup>H NMR (400 MHz, DMSO-d<sub>6</sub>) δ 12.20 (s, 1H), 10.46 (bs, 1H), 9.27 (s, 1H), 7.78 (d, J = 8.19Hz, 1H), 7.37 (d, J = 8.19Hz, 1H), 7.33 (d, J = 8.19Hz, 1H), 7.29 (t, J = 7.61Hz, 1H), 7.10 (s, 1H), 7.04 (d, J = 8.19Hz, 1H), 6.99 (t, J = 7.61, 1H), 3.96 (bd, J = 7.18Hz, 2H), 3.89 (bs, H<sub>2</sub>O), 3.63 (bd, J = 7.18Hz, 2H), 3.43-3.20 (m, 6H), 3.03-2.94 (m, 2H), 2.16 (s, 3H), 2.02 (s, 3H).

### Preparation 53

#### 25 4-[2-(4-BENZO[D]ISOTHAZOL-3-YL)-PIPERAZIN-1-YL]-ETHYL]-2-METHYL-PHENYLAMINE HYDROCHLORIDE

N-[4-[2-(4-Benzo[d]isothiazol-3-yl)-piperazin-1-yl]-ethyl]-2-methyl-phenyl]-acetamide (1.760 g, 4.462 mmol) was heated to reflux in 1,4-dioxane (25 mL) and 25% aqueous potassium hydroxide (25 mL). After 20 30 days the reaction was complete and diluted with H<sub>2</sub>O (100 mL), and ethyl/acetate (100 mL). The layers were separated and the aqueous layer extracted with ethylacetate (3x50 mL). The organics were dried (MgSO<sub>4</sub>)

5        6-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-2-methyl-pyridin-3-ylamine and 6-[2-(4-1,2-Benzisothiazol-3-yl-piperazin-1-yl)-ethyl]-2-methyl-pyridin-5-ylamine

10        A round bottomed flask was charged with 5 g (22.8 mmol) of 3-(1-piperazinyl)-1,2-benzisothiazole and 20 mL dimethylformamide dimethylacetal. The solution was heated to 90 °C for 20 h and then concentrated in vacuo. The resulting yellow solid was treated with 3.76 g (2,6-dimethyl-3-nitropyridine in 22 mL DMF and heated to 100 °C for 48 h. The reaction was then cooled and concentrated in vacuo. This crude reaction product was dissolved in 90 mL dichloroethane and 1.9 mL (33 mmol) HOAc, cooled to 0 °C, and treated with 9.4 g (44 mmol) NaBH(OAc)<sub>3</sub>. The reaction was allowed to warm to rt overnight and then stirred for 90 h. The reaction was quenched with 200 mL K<sub>2</sub>CO<sub>3</sub> and 100 mL CH<sub>2</sub>Cl<sub>2</sub>. The organic extracts were dried over MgSO<sub>4</sub>, filtered, and concentrated in vacuo to give 15.5 g of a red liquid. This red liquid was  
20        crudely purified by filtration chromatography to give 5.3 g of a crude

mixture of the desired nitro compounds as an approximate 1 : 1 mixture. This crude mixture was hydrogenated (50 psi) for ~ 65 h in 100 mL THF:triethylamine (19 :1 ) using RaNi catalyst. The reaction was filtered and concentrated to give 5 g of crude material which was purified by SiO<sub>2</sub> chromatography using a gradient of EtOAc to 10% MeOH/EtOAc. This purification gave 0.30 g of isomer A and 0.46 g of isomer B, both as orange oils. Additionally, 1.1 g of a fraction containing both isomers was isolated. Isomer A: MS (APCI): 354 [M+H]<sup>+</sup>. Isomer B: MS (APCI): 354 [M+H]<sup>+</sup>.

N-[6-[2-(4-1,2-BENZISOTHIAZOL-3-YL-PIPERAZIN-1-YL)-ETHYL]-2-METHYL-PYRIDIN-3-YL]-ACETAMIDE

A 2 dram vial was charged with 0.1004 g (0.28 mmol) of isomer B and 3 mL CH<sub>2</sub>Cl<sub>2</sub>. To this solution was added 83  $\mu$ L (2.1 eq, 0.59 mmol) Et<sub>3</sub>N and 22  $\mu$ L (1.1 eq, 0.31 mmol) CH<sub>3</sub>COCl. The reaction was stirred for 8 h at rt at which time it was quenched with 2 mL 1 M NaHCO<sub>3</sub> and filtered through a 1.0  $\mu$ M PTFE filter. Concentration of the resulting solution gave 0.098 g of the crude, desired product as a white solid. This crude material was purified by gravity chromatography (SiO<sub>2</sub>, 10% MeOH/EtOAc) to give 0.0536 g (48% yield) of the purified material. such as an addiction to gambling; and ocular disorders such as glaucoma and ischemic retinopathy in a mammal, including a human, comprising administering to a mammal in need of such treatment an amount of a compound according to claim 1, or a pharmaceutically acceptable salt thereof, that is effective in treating such disorder or condition.

11. A method according to claim 10, wherein the disorder or condition that is being treated is selected from schizophrenia, schizoaffective disorder, delusional disorder, substance-induced psychotic disorder, brief psychotic disorder, bipolar disorder, shared psychotic disorder, psychotic disorder due to a general medical condition, and schizophreniform disorder.

12. A method according to claim 10, wherein the disorder or condition that is being treated is selected from generalized anxiety disorder, panic disorder, obsessive-compulsive disorder, post-traumatic stress disorder, and phobias, including social phobia, agoraphobia, and specific phobias.

13. A method according to claim 10, wherein the disorder or condition being treated is schizophrenia with concomitant anxiety.

14. A method of treating a disorder or condition selected from single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression, melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective disorder and pediatric depression; bipolar disorders or manic depression, for example, bipolar I disorder, bipolar II disorder and cyclothymic disorder; conduct disorder; disruptive behavior disorder; behavioral disturbances associated with mental retardation, autistic disorder, and conduct disorder; anxiety disorders such as panic disorder with or without agoraphobia, agoraphobia without history of panic

disorder, specific phobias, for example, specific animal phobias, social anxiety, social phobia, obsessive-compulsive disorder, stress disorders including post-traumatic stress disorder and acute stress disorder, and generalized anxiety disorders; borderline personality disorder; 5 schizophrenia and other psychotic disorders, for example, schizophreniform disorders, schizoaffective disorders, delusional disorders, brief psychotic disorders, shared psychotic disorders, psychotic disorders with delusions or hallucinations, psychotic episodes of anxiety, anxiety associated with psychosis, psychotic mood disorders such as 10 severe major depressive disorder; mood disorders associated with psychotic disorders such as acute mania and depression associated with bipolar disorder; mood disorders associated with schizophrenia; delirium, dementia, and amnesic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), 15 Alzheimer's disease, senile dementia, dementia of the Alzheimer's type, memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies; movement disorders such as akinesias, dyskinesias, including 20 familial paroxysmal dyskinesias, spasticities, Tourette's syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia, neuroleptic-induced acute 25 akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour; chemical dependencies and addictions (e.g., dependencies on, or addictions to, alcohol, heroin, cocaine, benzodiazepines, nicotine, or phenobarbitol) and behavioral addictions such as an addiction to gambling; and ocular disorders such as glaucoma 30 and ischemic retinopathy in a mammal, including a human, comprising administering to said mammal:

(a) a compound according to claim 1 or a pharmaceutically acceptable salt thereof; and

-178-

(b) another pharmaceutically active compound that is an antidepressant or an anti-anxiety agent, or a pharmaceutically acceptable salt thereof;

5           wherein the active agents "a" and "b" are present in amounts that render the combination effective in treating such disorder or condition.

15           15. A pharmaceutical composition for treating a disorder or condition selected from single episodic or recurrent major depressive disorders, dysthymic disorders, depressive neurosis and neurotic depression,  
10           melancholic depression including anorexia, weight loss, insomnia, early morning waking or psychomotor retardation; atypical depression (or reactive depression) including increased appetite, hypersomnia, psychomotor agitation or irritability, seasonal affective disorder and pediatric depression; bipolar disorders or manic depression, for example,  
15           bipolar I disorder, bipolar II disorder and cyclothymic disorder; conduct disorder; disruptive behavior disorder; behavioral disturbances associated with mental retardation, autistic disorder, and conduct disorder; anxiety disorders such as panic disorder with or without agoraphobia, agoraphobia without history of panic disorder, specific phobias, for example, specific  
20           animal phobias, social anxiety, social phobia, obsessive-compulsive disorder, stress disorders including post-traumatic stress disorder and acute stress disorder, and generalized anxiety disorders; borderline personality disorder; schizophrenia and other psychotic disorders, for example, schizophreniform disorders, schizoaffective disorders, delusional  
25           disorders, brief psychotic disorders, shared psychotic disorders, psychotic disorders with delusions or hallucinations, psychotic episodes of anxiety, anxiety associated with psychosis, psychotic mood disorders such as severe major depressive disorder; mood disorders associated with psychotic disorders such as acute mania and depression associated with  
30           bipolar disorder; mood disorders associated with schizophrenia; delirium, dementia, and amnestic and other cognitive or neurodegenerative disorders, such as Parkinson's disease (PD), Huntington's disease (HD), Alzheimer's disease, senile dementia, dementia of the Alzheimer's type,

-179-

- memory disorder, vascular dementia, and other dementias, for example, due to HIV disease, head trauma, Parkinson's disease, Huntington's disease, Pick's disease, Creutzfeldt-Jakob disease, or due to multiple aetiologies; movement disorders such as akinesias, dyskinesias, including
- 5 familial paroxysmal dyskinesias, spasticities, Tourette's syndrome, Scott syndrome, PALSYS and akinetic-rigid syndrome; extra-pyramidal movement disorders such as medication-induced movement disorders, for example, neuroleptic-induced Parkinsonism, neuroleptic malignant syndrome, neuroleptic-induced acute dystonia, neuroleptic-induced acute
- 10 akathisia, neuroleptic-induced tardive dyskinesia and medication-induced postural tremour; chemical dependencies and addictions (e.g., dependencies on, or addictions to, alcohol, heroin, cocaine, benzodiazepines, nicotine, or phenobarbital) and behavioral addictions such as an addiction to gambling; and ocular disorders such as glaucoma
- 15 and ischemic retinopathy in a mammal, comprising:
- (a) a compound according to claim 1 or a pharmaceutically acceptable salt thereof;
  - (b) another pharmaceutically active agent that is an antidepressant or an anti-anxiety agent; and
  - 20 (c) a pharmaceutically acceptable carrier.

## INTERNATIONAL SEARCH REPORT

International Application No.

PCT/IB 03/04805

## A. CLASSIFICATION OF SUBJECT MATTER

IPC 7 C07D275/04 C07D275/06 C07D417/12 A61K31/425 A61P25/18

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, PAJ, BEILSTEIN Data, CHEM ABS Data

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.

## \* Special categories of cited documents:

\*\* document defining the general state of the art which is not

considered to be of particular relevance

\*\* earlier document but published on or after the international

filing date

\*\* document which may throw doubts on priority claim(s) or

which is cited to establish the publication date of another

citation or other special reason (as specified)

\*\* document referring to an oral disclosure, use, exhibition or

other means

\*\* document published prior to the international filing date but

later than the priority date claimed

\*\* later document published after the international filing date

or priority date and not in conflict with the application but

cited to understand the principle or theory underlying the

invention

\*\* document of particular relevance; the claimed invention

cannot be considered novel or cannot be considered to

involve an inventive step when the document is taken alone

\*\* document of particular relevance; the claimed invention

cannot be considered to involve an inventive step when the

document is combined with one or more other such docu-

ments, such combination being obvious to a person skilled

in the art

\*\* document member of the same patent family

# INTERNATIONAL SEARCH REPORT

International app. No.  
PCT/IB 03/04305

## Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:  
Although claims 9-15 are directed to a method of treatment of the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. ☐ Claims Nos.:  
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(e).

## Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

### Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.
